User guide

binary name: B2-userguide.pdf
delivery method: GitHub

Write a user guide for one of the following features of the EPITECH Intranet:

- choice n ° 1: how to use e-learning
- choice n ° 2: how to register for a project

This manual is intended for new EPITECH students.

> Your document must give all the necessary informations, and contain the appropriate illustrations.

Here are some wise tips:

- write a complete title that communicates to your reader all the information he needs to identify your document and the subject he is talking about;
- adopt a clear explanatory logic for your reader: what is it? What is this for ? how to use it?
- provide all the explanations necessary so that your reader can use the object you are talking about without asking questions;
- facilitate reading: essential explanations and clear sentences in a neat layout;
- help your reader to find his way easily: titles, subheadings, subdivision into paragraphs, bold characters, color, bullets, necessary illustrations (captions);
- carry out quality checks on the document before sending it: the proofreading phase is essential.
